

IN THE CLAIMS

1. (Currently Amended) A solar cell module comprising:

a ~~front surface~~ light incidence side light transmitting member made of a glass containing at least sodium;

a rear surface member which is a resin film;

a plurality of solar cell elements sealed with a sealing resin between the ~~front surface~~ light incidence side light transmitting member and the rear surface member, wherein the light incidence side light transmitting member is adhered at a light incidence side of the plurality of solar cell elements by interposing the sealing resin;

the rear surface member is adhered at a rear surface side of the plurality of solar cell elements by interposing the sealing resin;

wherein the solar cell element has a ~~semiconductor junction formed with a p-type or n-type crystalline silicon substrate on which~~ a transparent electrode at one side of a p-type or n-type crystalline silicon substrate is formed and an n-type or p-type thin film amorphous semiconductor layer at the other side of a p-type or n-type crystalline silicon substrate, on which a transparent electrode is formed, wherein a p-n junction is formed between the crystalline substrate and the thin film amorphous semiconductor layer; and

the crystalline silicon substrate is positioned between the thin film amorphous semiconductor layer and the light transmitting member.

~~the crystalline substrate is positioned on a side of the front surface side light transmitting member, and the thin film amorphous semiconductor layer is positioned on a side of the rear surface side member.~~

2. (Previously Amended) The solar cell module according to claim 1, wherein

the solar cell element is structured so that light enters from a side of the crystalline substrate.

3. (Cancelled)

4. (Original) The solar cell module according to claim 1,
wherein the rear surface member is formed of transparent material.

5. (Original) The solar cell module according to claim 1,
wherein the rear surface member is a transparent resin film.

6. (Cancelled)

7. (Original) The solar cell module according to claim 1,
wherein the solar cell element includes an amorphous semiconductor layer in at least a
part of the solar cell element.

8. (Cancelled)
